

RECYCLED FACT SHEET

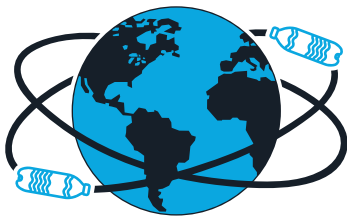

It takes **FIVE TO SIX PLASTIC BOTTLES** to make a Scimitar recycled running vest or technical t-shirt. That's six bottles saved from entering our ocean or disrupting wildlife ecosystems.

Our fabric supplier has **RECYCLED OVER 14.2 BILLION BOTTLES** so far, and are aiming for 20 billion in total by 2020. By using Scimitar recycled fabric, you become part of this exciting journey.

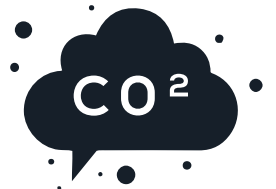

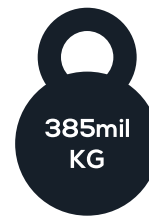

20 BILLION by 2020

x70

14 billion bottles are enough to go around the world **SEVENTY TIMES** if you were to lay them end to end. That's a fair old distance – it's 2.8 million kilometres, to be precise!

385 MILLION KILOGRAMS OF CO₂ have been avoided in the recycling of the 14 billion bottles so far, improving the level of air quality and reducing the impact of CO₂.

x3.5 mil

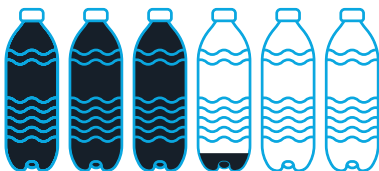

If every running vest, technical t-shirt or cycling jersey we produced in 2018 was made from our recycled fabric, we would have been personally responsible for over **3.5 MILLION RECYCLED BOTTLES**.

That may sound like a lot, but the scale of the problem is bigger than you think. **ONE MILLION PLASTIC BOTTLES ARE BOUGHT WORLDWIDE EVERY MINUTE.**

x20mil

57%

In the UK alone, **WE USE AROUND 13 BILLION PLASTIC BOTTLES EVERY YEAR**, with only 7.5 billion (57%) of these bottles being recycled after use.

In Norway, bottles are sold with a small deposit that's refunded when empties are returned. It's funded by unclaimed deposits and levies on drinks manufacturers. The result? **MORE THAN 97% OF BOTTLES BEING RECYCLED ANNUALLY.**

97%

Opt for recycled fabric and together, let's

#BreakBoundaries.
